

## **CS 744 - Management Issues in Software Engineering Project Meeting**

**Project Title:** Visual Network Testing Tool

**Group Name/Number:** Team Mercury **Meeting #:** 4

**Held On:** Feb 7, 2018 at 2:30 pm

**Location:** Murphy Library

**Members:** Zeya Kong, Xianrui Zhu, Kyle Van Allen

**Attended:** All

**Topics for Discussion:** Review demo1 and plan demo2

**Report Writer:** Zeya Kong

---

All members attended at the correct time and we began the meeting at the scheduled 2:30 pm.

The topics of this meeting are three parts, 1. Reviewed the demo1 and make the conclusion. 2. What should we do in second demo. 3. How to do that and the tasks allocation. Firstly, Kyle told his experience about developing the database and he mentioned that he will change and create some tables in database, because he got some new ideas from Dr. Kasi. Zeya talked about the integration and required other team members to work quickly, because integration itself need much time to do and it must start after others' work finished. Kyle and Xianrui agreed. Xianrui talked about the GUI and he will changed the GUI according to the feedback from Dr. Kasi.

In the second topic, Kyle shared his idea about the second demo task. He said we should implement the viewing network function because this function has the highest priority in this project. Zeya agreed and said we should complete the edit credit card function because we have already completed the view credit card function. Xianrui agreed others' opinion and he also shared an idea about the login function. He said we should fix the bugs about login function before we started new function. Zeya agreed, and he said he will do it because it comes from the back-end. Kyle also agreed Xianrui's opinion. Anyway, we decided to complete the function called viewing the network and fixed some bugs in login function. In addition, if we have time, we will do editing credit card function which asked by Zeya.

About the allocation, all team members shared the same opinion which said we should not change the developing position because if we change our jobs, it might spend much time. So, Kyle will also do the DB work and Xianrui will do the GUI. Zeya will do the framework backend, integration and he shared his code to help others understand the framework. Finally, Kyle updated some documents such as user stories and sprint tasks in our GitHub website.

Next meeting and its agenda:

The next meeting will take place on Feb 12, 2018 at 2:30 pm in Murphy Library. We plan to talk about the technical details of the second demo. in that time, Kyle will finish changing the DB and Zeya will start the back-end code. Xianrui will finish redesigning the GUI about the website main page.
